

---

# The ugly....

- The difference in life-expectancy between developing and developed countries increases up to 40 years
  - The ratio of child mortality between developing and developed countries was
    - 5,5 in 1960
    - 10,3 in 1990
    - 13,0 in 2002
    - 15,6 in 2014
  - Also major differences within countries – also in rich countries
-
